### TARGET AUDIENCE

This advanced course is designed for pain practitioners  
(pain specialists, anesthesiologists, neurosurgeons) utilizing  
invasive techniques for pain management.

Physicians attending the course should have at least 2  
years of practice with ongoing use of neuromodulation  
techniques in the treatment of chronic pain patients.

### OBJECTIVES

After participation in this educational meeting, participants  
should have an understanding of:

1. Basic neuroanatomy related with the performance of  
pain therapies.
2. Clinical evidence regarding new and evolving  
treatments for the treatment of pain.
3. Current imaging and electrophysiological technologies  
relevant for performing diagnosis and performing the  
invasive techniques for pain treatment.
4. Common clinical problems in chronic pain and current  
recommendations for the evaluation and management  
of these pain conditions.

5. Evidence-Based treatments in pain medicine.
6. Identify questions that need to be addressed to increa-  
se knowledge of neuromodulation techniques use in  
pain treatment.
7. How to design the Pain studies for obtaining better the  
evidence.
